

UK Central Graben: Overpressure and Compartment Maps

- Overpressure Mapping of 213 wells in UK Central Graben complete.
- >40 distinct overpressure compartments identified at Jurassic-Triassic level, using in-house seismic interpretation and slope magnitude maps across study area, with purchased and published facies distribution and structural interpretations from various sources used in analysis.
- Maps of overpressure values only, or with overpressure compartments available to purchase.
- Whole area, or bespoke sub-areas available on request.

Also available:

- Workshop to discuss work done, overview of rationale for definition of any compartment, understand vertical and lateral overpressure variations, other findings, applications, and further value adding exercises.
- Integrate your own interpretation.
- Work-up of new areas or extension into other areas.
- Analysis to estimate overpressure in untested areas.
- Seismic interpretation products.
